Weekly Summary

1. Finishing the dataset building and the and the manually marked the sentiment of each sentiment, and invited the three other people to mark this dataset
2. Finishing writing background and introduction parts of the report.
3. Trying overwrite the SentimentIntensityAnalyzer(), and saved the order of tokens before dividing them, then counting the sentiment score by dividing I by the former one and multiplying the weights of negation. Then comparing the result with the original one, the performance is even worse.

Plan for next week:
1. Following up the progress of marking
2. Finishing related work and design part of the report
3. Improving the algorithm by more complex formula, and trying to find out a proper way of dealing with the special tokens
